

# Stella Fournier

Welcome to my personal website

## Introduction

Hi, I'm Stella. I am currently a 3<sup>rd</sup> year majoring in electrical engineering at Georgia Institute of Technology. I fell in love with engineering when I realized that it is a very creative and interdisciplinary subject field. For example, I am currently in a research making artistic robotic painting system. Since I am an artistic and creative person, I love how I can combine the more artistic subject to a more concrete field, like engineering and robotics.

One thing that I am constantly doing every day is to explore. I am a curious electrical engineer and I am willing to learn any new skills provided to me. For example, I self-learned HTML and Java to build this personal website.

Furthermore, I am a Peer Instructor at an interdisciplinary makerspace on campus in which I help students facilitate their personal projects. To become a Peer Instructor, I get to learn how to operate all the equipment in the makerspace, including PCB manufacturing, 3D printing, laser cutting, wood working, embedded systems, and electronics benchtop.

I am an ambitious, empathetic, and creative individual. Therefore, you can count on me to not only adapt to collaborative environments with others on my team, but also excel at pushing myself forward with new challenges as an individual. For instance, I worked on three different projects concurrently during my summer internship at GTRI. Volunteering at The Hive Makerspace at Georgia Institute of Technology, I facilitated personal innovative projects by helping students operate the machines and equipment in six different technical areas. Furthermore, I led a team of engineering students on artistic painting robotic swarms for my research. I took on the role of designing the PCB for the painting system and setting up weekly meetings, where professional communication skills were needed when I conversed with a company on their sponsor to our project. I am able to communicate effectively in English, French and Mandarin as I share my knowledge and daring ideas to others.
